

Prevent Dryer Fires

Dryers caused 1/5 of the fires in nursing homes. They are one of the leading causes of fires in homes, hotels and motels, and hospitals.

- **Clean the filter screen after each load.**

This will keep the vent clear. When accumulated lint clogs the vent, the dryer can overheat and a fire could result.

- **Stay home while the dryer is in use!**

Turn off the dryer before leaving the house.

- **Clean vents to outside.**

Twice a year you should clean the plastic hose pipe that vents to the outside. Use the vacuum cleaner to suck out accumulated dust and lint.

- **Vacuum the motor area.**

The dust and lint in the vent pipe can ignite if it gets hot enough. Vacuum the motor area if you can get to it. You may have to remove a panel to get at it.

- **Clean commercial dryer vents regularly.**

Commercial dryers get a lot of use and will have a common venting system. It is extremely important to have the vent systems cleaned regularly.

- **Don't dry mop heads.**

The dryer's heat can ignite the cleaning chemical residue on mop heads.
